

XI SCAR OPEN SCIENCE CONFERENCE

[XI SCAR, Pucón, Chile, 19-23 August 2024](#)

The 11th SCAR Open Science Conference was held in Pucón, Chile, 19-23 August. The programme and information are available via the conference website through [this link](#).

The SCAR Open Science Conferences are held every two years to draw attention to Antarctic issues. They provide an opportunity for scientists from a variety of disciplines and countries to present their work, to network and become more involved in SCAR science activities.

ASPeCt was represented by several scientific presentations and posters, as well as through active participation in SCAR Delegates meetings and side events. ASPeCt appreciates the opportunities to provide updates of its activities and forward plans to the [SCAR Physical Sciences Group](#) and to [Climate and Cryosphere](#), who held a 2.5 day side event.

ASPeCt COMMITTEE MEETING

ASPeCt's Scientific Steering Committee hold workshops every one to two years (approximately) to report on research, present plans and coordinate between national programs. All scientists with an active interest in Antarctic sea ice research are invited to participate in these meetings. Please express interest via the contact form on this page.
